EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Daniel P. Lent, Reg., 44,867 on Thursday, May 21, 2009.

The application has been amended as follows:

Claim 22 has been canceled.

Allowable Subject Matter

2. Claims 1-11 and 13-21 are allowed.

3. The following is an examiner's statement of reasons for allowance:

The prior art of record fail to teach or fairly suggest with respect to claim 1, a robot simulation device an environment defining ("ED") means for providing a virtual robot working environment in which a virtual robot works in a virtual working space where virtual obstacles are disposed, said virtual robot having a task of transferring a virtual object from a start point to a goal point, said ED means including a path determining means for determining a path of travel of said virtual object associated with said task of said virtual robot by designating via- points

between said start point and said goal point; and a task simulation executing and displaying ("TSED") means responsive to said ED means and said path determining means for executing simulation of said task of said virtual robot and displaying said executed simulation on a display; said TSED means including; a robot activity region determining and displaying means for determining from said determined path of travel of said virtual object a robot activity region where a moveable portion of said virtual region moves to achieve said task and for displaying said robot activity region on said display; and an interference region determining and displaying means responsive to said robot activity region for determining whether and where said task is interfered by said virtual obstacles thereby providing an interference region where said task is interfered by said virtual objects and for displaying said interference region on said display; whereby a desired executed simulation is obtained, in which said virtual robot successfully transfers said virtual object from said start point to said goal point without being; with respect to claim 13, a method of robot simulation comprising the steps of providing a virtual robot working environment in which a virtual robot works in a virtual working space where virtual obstacles are disposed, said virtual robot having a task of transferring a virtual object from a start point to a goal point, including determining a path of travel of said virtual object associated with said task of said virtual robot by designating via- points between said start point and said goal point; and executing simulation of said task of said virtual robot and displaying said executed simulation on a display, including; determining from said determined path of travel of said virtual object a robot activity region where a moveable portion of said virtual robot moves to achieve said task, and displaying said robot activity region on said display; and determining an interference region by determining whether and where said task is interfered by said virtual obstacles, and displaying

Art Unit: 3664

said interference region on said display, obtaining a desired executed simulation in which said virtual robot successfully transfers said virtual object from said start point to said goal point without being interfered by said virtual obstacles in combination with the other elements and features of the claimed invention.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
